

FlixNow — AI-Powered Movie Discovery Platform

Discover Movies. Get AI Recommendations. Find Your Next Favorite.

An AI-powered movie discovery platform built with React, Tailwind CSS, TMDB API and Google Gemini.

Overview

FlixNow is an AI-powered movie discovery platform designed to make finding movies easier, smarter, and more personalized.

Users can browse trending and now-playing movies, explore detailed movie information, manage their watchlist, watch trailers, discover movies based on their mood, and use AI-powered features to understand and explore movies.

The application combines the **TMDB API** for movie data with **Google Gemini** for intelligent movie recommendations and analysis.

Features

Movie Discovery

- Trending movie banner
 - Now Playing movies
 - Pagination
 - Movie posters
 - Movie ratings
 - Movie popularity
 - Movie search
 - Genre-based discovery
 - Runtime-based movie filtering
 - Smart movie discovery
-

Mood-Based Movie Discovery

Tell FlixNow how you're feeling and discover movies that match your mood.

Available moods include:

- 😊 Happy & Energetic
- 😞 Melancholic
- 😄 Thrilled & Adventurous
- 😌 Chill & Relaxed
- 🤔 Curious & Thoughtful
- 🥰 Nostalgic
- 🦸 Brave & Daring
- ❤️ Romantic

The AI analyzes the selected mood and recommends movies based on:

- 🎭 Genres
- 🗣️ Mood keywords
- 💬 Emotional tone
- 🎬 Movie themes

🎭 AI Movie Recommendations

FlixNow can analyze movies in the user's watchlist and generate personalized recommendations.

The AI provides:

- 🎬 Recommended movie
- 💡 Reason for recommendation
- 📊 Confidence score
- 🧠 User taste summary

🔍 Smart Search

FlixNow provides intelligent movie discovery using customizable filters.

Users can discover movies based on:

- 🎭 Genre
- ★ Rating
- 🔥 Popularity
- ⌚ Runtime
- 📅 Release information
- 🔄 Sorting preferences

This makes it easier to find movies that match specific preferences.

📝 AI Movie Summary

Users can generate a concise AI-powered summary of a movie.

The AI analyzes movie information and provides:

-  Quick summary
 -  Main themes
 -  Why you might enjoy the movie
-

AI Climax & Ending Explanation

Want to know how the movie ends?

FlixNow provides an optional AI-powered spoiler feature.

Users must explicitly confirm before viewing spoilers.

The feature provides:

-  Climax explanation
-  Ending explanation
-  Ending meaning
-  Spoiler warning

 **Spoilers are shown only after user confirmation.**

Movie Details

Each movie has a dedicated details page containing:

-  Movie title
 -  Overview
 -  Rating
 -  Popularity
 -  Release date
 -  Runtime
 -  Genres
 -  Trailer
 -  Cast
 -  Crew
 -  Similar movies
 -  Best review
 -  AI summary
 -  AI climax explanation
-

Movie Trailers

Users can watch movie trailers directly inside FlixNow.

Trailer data is retrieved using TMDB and displayed through YouTube.

Features include:

-  Trailer playback
 -  Full-screen support
 -  Closeable trailer modal
 -  Movie-specific trailer
-

Cast & Crew

Movie details include information about the people involved in the movie.

Users can explore:

-  Actors
 -  Directors
 -  Writers
 -  Crew members
-

Best Review

FlixNow retrieves movie reviews and identifies a highly rated review.

The feature considers:

-  Review rating
-  Review content
-  Reviewer

Users can quickly access a highlighted review without manually searching through all available reviews.

Watchlist

Users can create their own personal movie watchlist.

Features include:

-  Add movie
-  Remove movie
-  Search watchlist
-  Filter by genre
-  Sort by rating
-  Sort by popularity
-  Persistent storage using LocalStorage

The watchlist remains available even after refreshing the browser.

AI Features

FlixNow uses **Google Gemini** to provide intelligent movie experiences.

Feature	Purpose
 Mood Picker	Recommend movies based on mood
 Watchlist Recommendations	Learn user's movie taste
 AI Summary	Generate movie summaries
 AI Climax	Explain climax and ending
 Smart Search	Intelligent movie discovery

Tech Stack

Frontend

-  React
-  JavaScript
-  Tailwind CSS
-  React Router
-  Axios
-  Vite

Movie Data

TMDB API

Used for:

- Movie discovery
- Movie search
- Movie details
- Trending movies
- Now Playing movies
- Movie videos
- Cast & crew
- Similar movies
- Reviews

Artificial Intelligence

Google Gemini API

Used for:

- Mood-based recommendations
- Personalized recommendations

- AI movie summaries
- Climax and ending explanations

Storage

Browser LocalStorage

Used to persist the user's watchlist locally.

```

Getting Started

Follow these steps to run FlixNow locally.

1 Clone the Repository

```
git clone https://github.com/KeerthyHQ/FlixNow-AI-powered-movie-discovery-  
platform.git
```

Navigate into the project:

```
cd FlixNow-AI-powered-movie-discovery-platform
```

2 Install Dependencies

Install all required npm packages:

```
npm install
```

3 Get Your API Keys

FlixNow requires two APIs:

TMDB API

Create a TMDB account and generate an API key from the TMDB developer dashboard.

You need the API key for retrieving movie information.

Google Gemini API

Create a Gemini API key from Google AI Studio.

The Gemini API is used for the AI-powered movie features.

4 Configure Environment Variables

Create a `.env` file in the root directory:

```
VITE_TMDB_API_KEY=your_tmdb_api_key  
VITE_GEMINI_API_KEY=your_gemini_api_key
```

Replace the placeholder values with your actual API keys.

 **Important:** Never commit your `.env` file to GitHub.

Make sure `.gitignore` contains:

```
node_modules/  
.env  
dist/
```

5 Start the Development Server

Run:

```
npm run dev
```

Vite will start the development server.

Open the URL shown in your terminal, usually:

```
http://localhost:5173
```

 **FlixNow is now running !**

How to Use FlixNow

 Discover Movies

Browse trending and currently playing movies from the home page.

 Search

Use the search functionality to find movies by title.

 Explore by Mood

Select a mood and let AI recommend movies that match your current feeling.

Use Smart Search

Apply filters such as genre, rating, popularity, runtime, and sorting preferences.

Explore Movie Details

Select any movie to view:

- Movie information
- Rating
- Genres
- Runtime
- Cast
- Crew
- Reviews
- Similar movies
- Trailer

Generate AI Summary

Use the AI summary feature to get a quick explanation of the movie.

Explore the Ending

If you want spoilers, confirm the spoiler warning to reveal the AI-generated climax and ending explanation.

Build Your Watchlist

Add movies you want to watch later.

Your watchlist is stored in **LocalStorage**, so it remains available after refreshing the page.

Get Personalized Recommendations

Add movies to your watchlist and use the AI recommendation feature to discover movies based on your movie taste.

Environment Variables

Variable	Description
VITE_TMDB_API_KEY	API key used to access TMDB
VITE_GEMINI_API_KEY	API key used for Gemini AI features

 Keep API keys private and never upload your `.env` file to GitHub.

Available Scripts

Run these commands from the project directory:

Command	Description
<code>npm install</code>	Install dependencies
<code>npm run dev</code>	Start development server
<code>npm run build</code>	Create production build
<code>npm run preview</code>	Preview production build

Deployment

FlixNow can be deployed using platforms such as:

- ▲ Vercel
- 🌐 Netlify
- 🏠 Render
- 📄 GitHub Pages

For deployment, make sure the required environment variables are configured in the hosting platform.

Security Notes

This project uses Vite environment variables.

Remember:

⚠ Variables prefixed with `VITE_` are exposed to the client-side application.

Therefore, API keys used in a frontend-only project should be treated as publicly accessible.

For a production application, sensitive API operations should ideally be handled through a backend/server-side proxy.

Future Improvements

Some potential improvements for future versions include:

- 🛡 User authentication
- ☁ Cloud-based watchlist

-  User profiles
-  Personalized movie preferences
-  More advanced AI recommendations
-  AI-powered movie search
-  AI movie chatbot
-  Movie recommendation history
-  Dark/light theme customization
-  Improved mobile responsiveness
-  Personalized movie notifications
-  Streaming platform availability
-  Multi-language support

What I Learned

Building FlixNow helped me strengthen my understanding of:

-  React component architecture
-  React Hooks
-  State management
-  API integration
-  Axios
-  React Router
-  Tailwind CSS
-  Environment variables
-  LocalStorage
-  Generative AI integration
-  TMDB API
-  Search and filtering
-  Pagination
-  Reusable components
-  Asynchronous JavaScript
-  Vite and frontend deployment

Project Highlights

AI-Powered Movie Discovery

Instead of relying only on traditional filters, FlixNow uses AI to provide personalized movie discovery.

Mood-Based Recommendations

Users can discover movies based on how they feel rather than only searching by genre.

Personalized Watchlist Recommendations

The application analyzes the user's watchlist to understand their movie preferences.

Spoiler-Controlled AI Ending

The climax and ending explanation is protected behind an explicit spoiler confirmation.

Complete Movie Experience

FlixNow combines movie discovery, trailers, reviews, cast, crew, similar movies, watchlists, and AI features into one platform.

Screenshots

Add screenshots of your application here to showcase the UI.

Example:

```
screenshots/  
├─ home.png  
├─ movie-details.png  
├─ mood-selector.png  
├─ smart-search.png  
├─ watchlist.png  
└─ ai-recommendations.png
```

Then add them to this section:

```
! [Home Page] (screenshots/home.png)  
  
! [Movie Details] (screenshots/movie-details.png)  
  
! [AI Recommendations] (screenshots/ai-recommendations.png)
```

Contributing

Contributions, suggestions, and improvements are welcome!

1. Fork the repository
2. Create a new branch

```
git checkout -b feature/your-feature
```

3. Make your changes
4. Commit your changes

```
git add .  
git commit -m "Add new feature"
```

5. Push the branch

```
git push origin feature/your-feature
```

6. Open a Pull Request
